

Why be.storaged?
From concept to completion.
Energy integration. Simplified.

We offer more than just products — we deliver full-cycle, tailored energy solutions. Whether you're launching a Utility Scale storage site, integrating smart storage into your business, or seeking the right EMS for your customers — we're your partner.

End-to-end expertise

Technology openness

Built around your needs

Subsidiary of EWE AG

Service beyond installation

Energy integration. Simplified.

Utility Scale

It means large, grid-connected battery storage systems that support the energy transition at national level. These systems stabilize the grid, enable renewable integration, and provide flexibility where it's most needed.

At be.storaged, we offer everything needed to realize these complex systems — from early development all the way through construction and long-term operation. We don't just build — we take care of land, permits, technical planning, and grid connection before the first shovel hits the ground.

Once the project is "Ready to Build" (RTB), we step into full EPC execution and beyond.

- ✓ Project development & RTB preparation
- ✓ Full EPC (Engineering, Procurement, Construction)
- ✓ Manufacturer independent technology
- ✓ Long-term service & O&M

Commercial & Industry

From small-scale factories to large industrial sites — we help businesses turn energy flexibility into real economic value. Our team supports you from day one: analyzing your needs, identifying the right battery size, and defining the best use cases for your site.

We're manufacturer independent, so we will always choose the technology that best fits your goals. Once your system is designed, we act as EPC to handle procurement, installation, and commissioning. But it doesn't stop there.

Our EMS okean optimizes your battery system for both local and electricity market-based use cases.

- ✓ End-to-end solution design
- ✓ Full EPC (Engineering, Procurement, Construction)
- ✓ Multi-use cases and behind-the-meter flexibility with okean
- ✓ Manufacturer independent technology

Partners & Manufacturers

Whether you're a battery manufacturer, system integrator, project developer, or CPO — we help you bring more value to your clients. With our EMS okean, we enable high-performance, future-proof energy systems that respond to real-world needs and market dynamics. okean goes far beyond basic system control. It enables load shifting, peak shaving, and more.

When the system is up and running, we're still there — offering preventive and corrective maintenance tailored to your setup.

Our platform is manufacturer independent and built for complex integrations.

- ✓ Multi-use operation with integrated flexibility
- ✓ Dynamic use cases, including \$19 atypical load management
- ✓ Charging site optimization for CPOs
- ✓ Fleet-wide asset management & analytics
