

Why become a Partner of be.storaged?

With be.storaged, you don't just get an energy management system - you get a strong technology and implementation partner who supports you every step of the way. From the initial project idea to successful scaling across multiple customer sites.

What our partnership delivers:

Technological reliability

Stable operation, regular updates, continuous development

Fast & seamless integration

Standardised integration into existing battery storage systems and infrastructure

Rapid market penetration

Expand offerings and enable new use cases

Proven expertise

Years of hands-on experience across a wide range of customer projects

Predictable scalability

Growth across multiple customer sites without additional effort

We shape your energy future –
simple, efficient and cost-effective

be.storaged

be.storaged

EMS Solutions for
System Integrators
& Battery
Manufacturers

One energy management system.
Seamless integration.

Your benefits as a be.storaged partner

For system integrators and battery manufacturers who want to offer their customers real added value. A partner for maximum cost efficiency for your customers, greater independence and intelligent control of complex energy systems.

Why okean is relevant

-  Increase cost efficiency
-  Increase independence
-  Stay future-ready
-  Maintain transparency

Our okean energy management system enables you not only to control energy systems, but also to utilise them strategically to their full potential.

What okean delivers in practice

okean enables intelligent operation of energy systems through:

 Active control of battery storage systems and charging infrastructure

 Integration of PV systems and other assets

 Cost optimisation through load- and market-oriented strategies

 Multiple use cases within a single system

As a partner, you integrate okean directly into your infrastructure and expand your portfolio with intelligent energy management functions – delivering real added value for your customers.

We support you from the commissioning of multiple sites right through to the scalable implementation of large project portfolios.

Multi-use-case operation – maximum cost efficiency for your customers

okean automatically activates the most cost-effective use cases as needed:

- 01 Peakshaving (Atypical Grid Usage):**
Reducing costly power peaks and lowering grid charges
- 02 Self-consumption optimisation:**
Maximum utilisation of locally generated PV and wind power
- 03 Procurement optimisation:**
Purchase electricity at optimal times and reduce your energy costs
- 04 Dynamic load management:**
Efficient charging infrastructure - no additional grid capacity required

What makes our solution unique:

okean combines manufacturer- and technology-neutral local control with cloud intelligence: stable in operation, precise in optimisation.
